Aerospace engineer with 8 years of experimental/computational aerodynamics and software building experience interested in aviation operations. Accustomed to precision work, fixed reporting cycles, and test schedules.

PROFESSIONAL EXPERIENCE

Graduate Research Assistant

Sep 2023 - present

Stanford University, USA

Concurrent research internship at Los Alamos National Laboratory

Jun 2026 - present

- Develop and optimize high-fidelity simulation tools for external aircraft aerodynamics running on some of the largest high-performance computing systems in the USA (Perlmutter, Chicoma), working to defined milestones across multiple supervisors and reporting to both technical and program-level audiences.

Research Engineer

Aug 2022 - Aug 2023

Institute of High Performance Computing, A*STAR, Singapore

- Delivered transonic flutter prediction methods for a commercial aircraft program funded by Bombardier Inc. under Singapore Aerospace Programme Cycle 16.
- Coupled aerodynamic and structural models (SU2, NASTRAN) to produce aerodynamic load predictions used by industry partner for flight-envelope clearance and airworthiness assessment.

Project Officer & Research Assistant

May 2019 - Aug 2022

School of Mechanical & Aerospace Engineering, Nanyang Technological University, Singapore

- Conducted wind tunnel dynamic pitch response tests on VTOL UAVs, working to written test procedures within time-limited tunnel slots and logging data for downstream analysis.
- Built system identification and regression models to characterize aircraft stability and handling qualities.
- Assessed conservation and boundary treatment errors in large-scale flow simulations.

EDUCATION

Stanford University, Stanford, CA, USA

Doctor of Philosophy (Mechanical Engineering)

Expected Sep 2028

5 years fully funded by A*STAR National Science Scholarship (PhD)

CGPA: 3.90/4.00

Nanyang Technological University, Singapore (NTU)

Master of Engineering (Mechanical & Aerospace Engineering)

Aug 2021 - Feb 2023

Bachelor of Engineering (Aerospace Engineering, Honors with Distinction)

Aug 2017 - Jun 2021

SKILLS & TRAINING

Aerospace	UAV flight testing, wind tunnel testing, flow diagnostics, high performance computing
Technical	Python, C++, MATLAB, SU2, OpenFOAM, ANSYS Fluent, SQL, Bash, CMake, Git, Slurm
Languages	English (native), Mandarin (fluent), Korean (basic)
Miscellany	Teaching Assistant for ME 257/357 Gas-Turbine Design Analysis (Stanford) International Forum for Aviation Research (IFAR) Early-Career Network; AIAA student member Currently working towards a Private Pilot License (PPL)
Interests	Flying (2027 UA 7 Hub Run, 2026 SFO-FRA weekend speedrun for retiring LH 747-8i), mech keebs
